

TRANSFER FACTOR

ADVANCED FORMULA™

*THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE.

IT'S VITAL TO HAVE A HEALTHY IMMUNE SYSTEM.

Our bodies are under attack from many more health threats than ever before. We are surrounded by millions of threats that have the potential to enter our bodies and cause harm.

BACTERIA

LACK OF SLEEP

PATHOGENS & VIRUSES

UNHEALTHY DIET OR LIFESTYLE

POLLUTION & TOXINS

PARASTES

STRESS

THE IMMUNE SYSTEM:

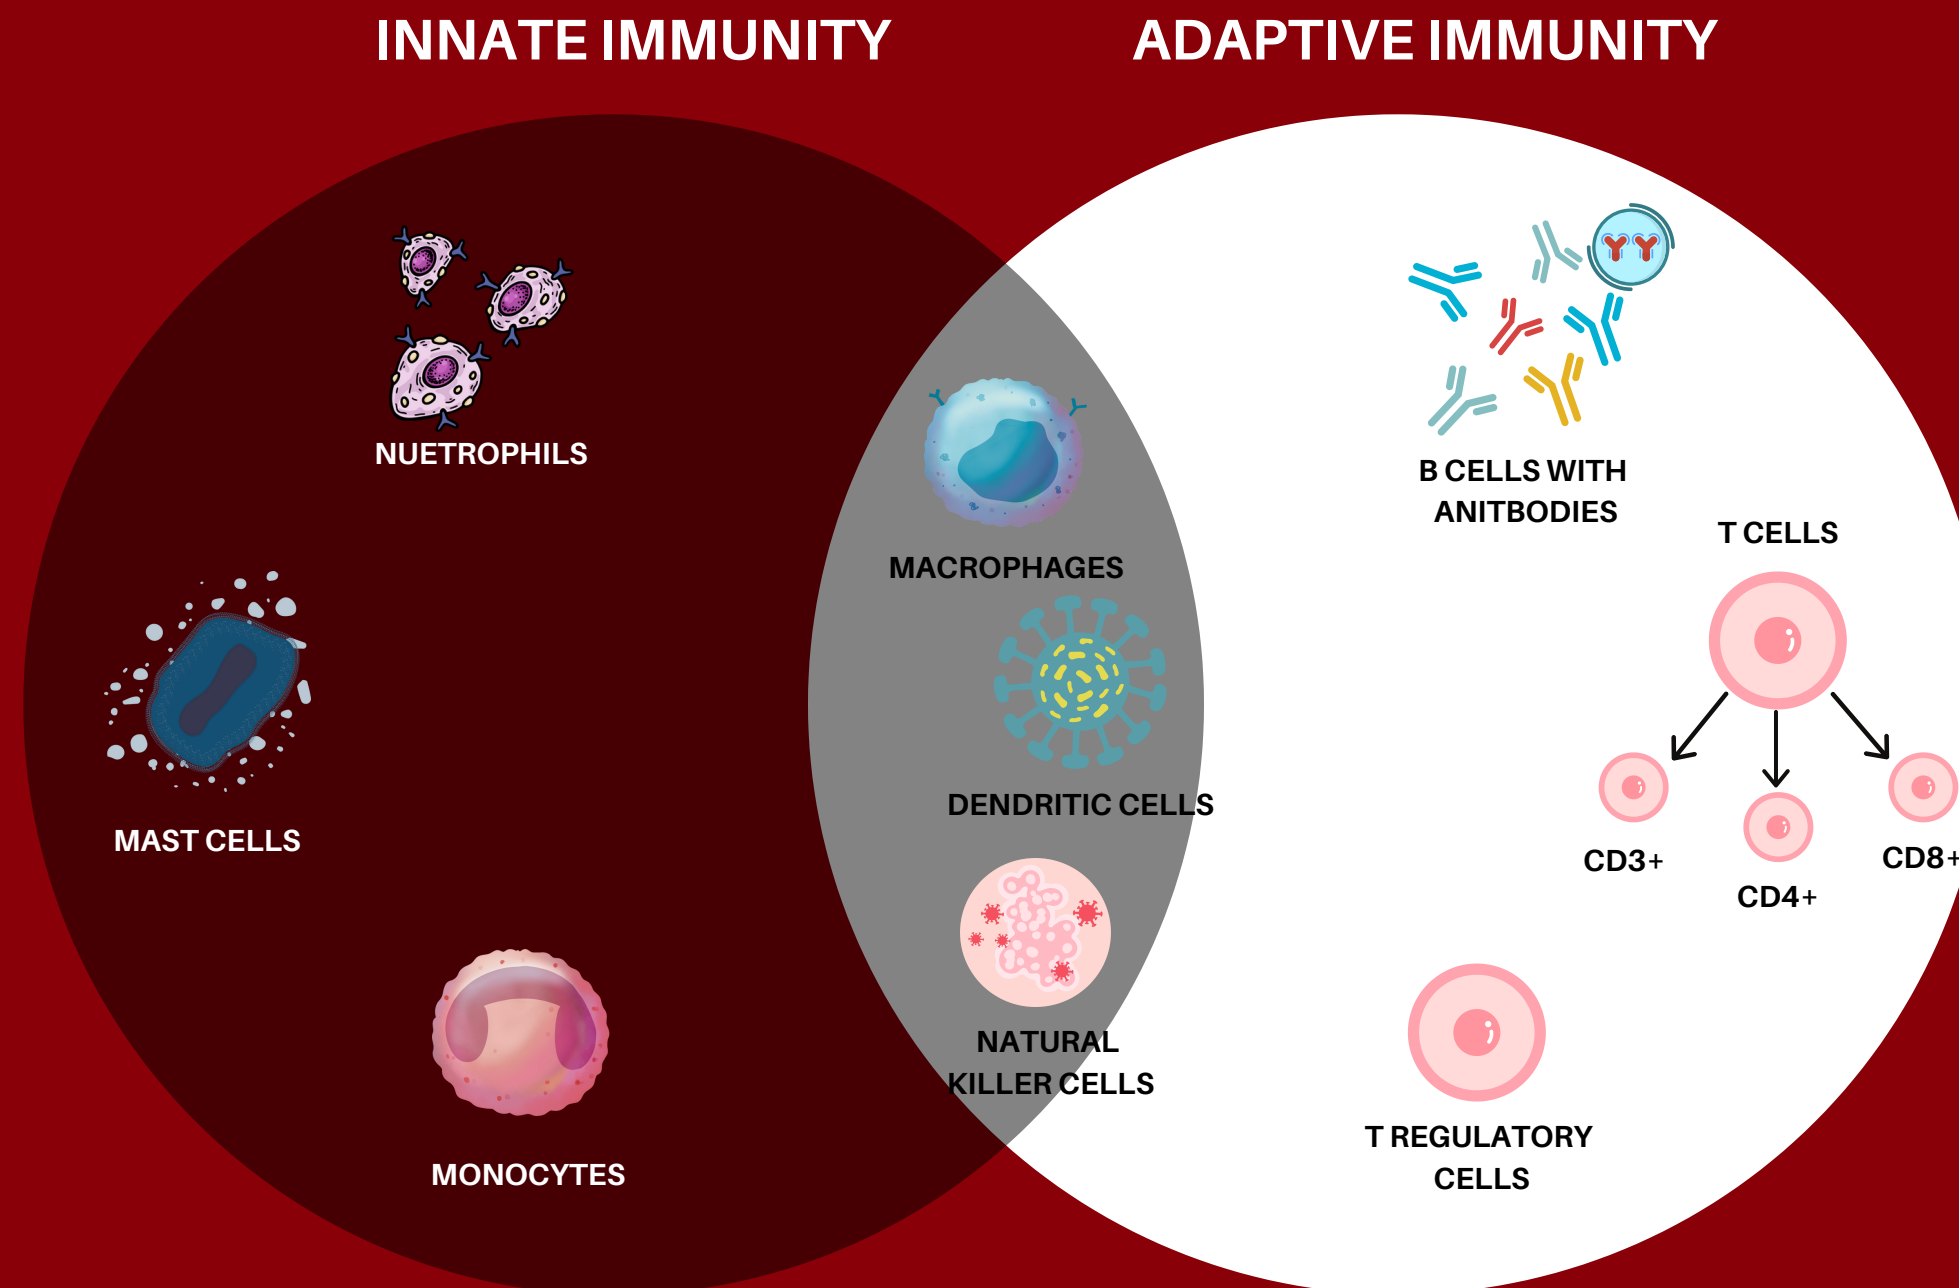

Contains thousands of cells, molecules, and body chemicals that are laboring night and day to keep you healthy—even alive.

The immune system requires it to have precise identification and communication to coordinate its defenses and to appropriately respond to health threats—and defeat them.

**MOST PEOPLE KNOW THESE TWO IMMUNE
SYSTEM FACTS BUT IT DOES SO MUCH MORE!**

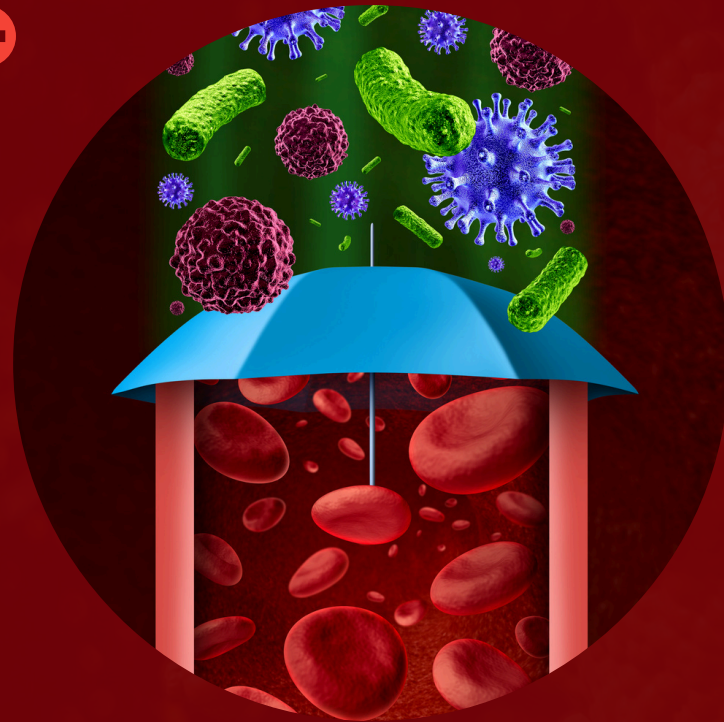

THE IMMUNE SYSTEM:

Innate, or nonspecific, immunity is the defense system with which you were born. It protects you against all antigens. Innate immunity involves barriers that keep harmful materials from entering your body. These barriers form the first line of defense in the immune response.

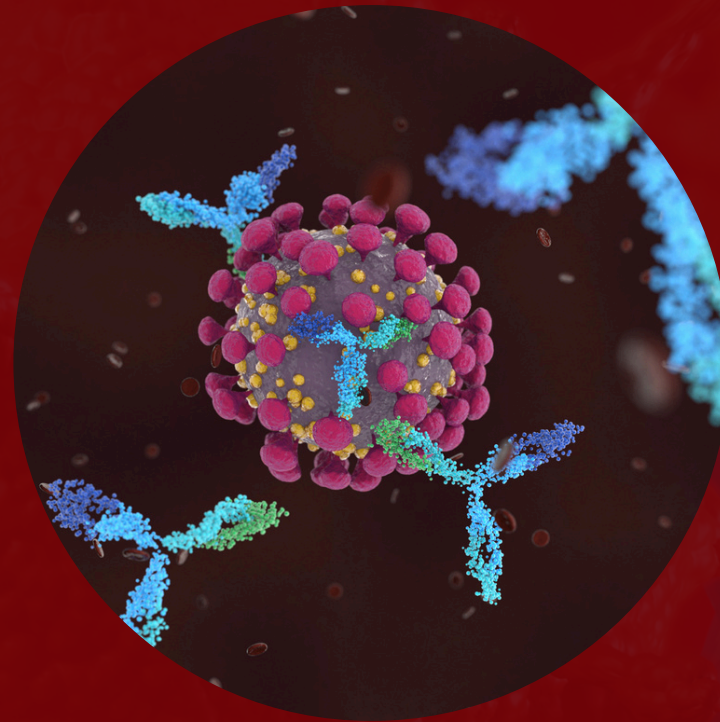

Adaptive immunity involves specialized immune cells and antibodies that attack and destroy foreign invaders and are able to prevent disease in the future by remembering what those substances look like and mounting a new immune response.

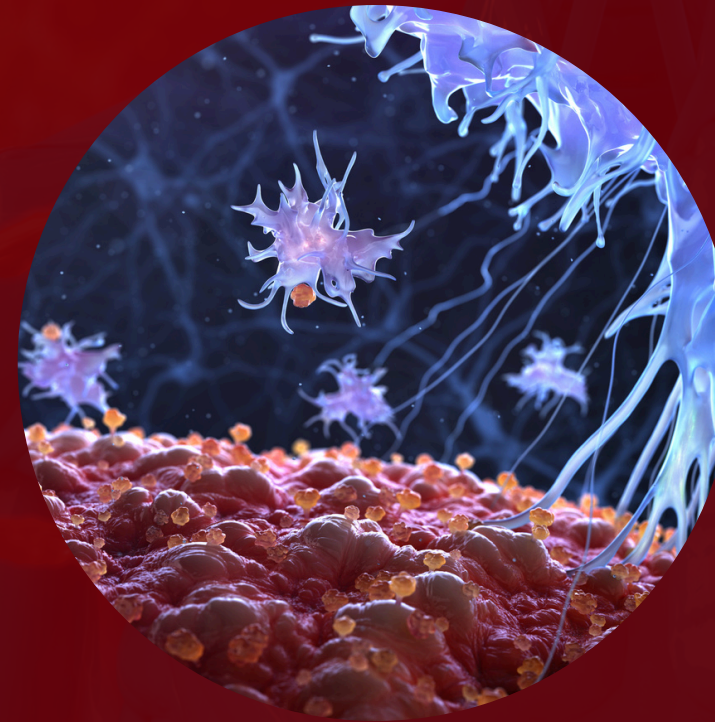

OTHER LESSER KNOWN BUT EXTREMELY IMPORTANT ROLES OF THE IMMUNE SYSTEM:

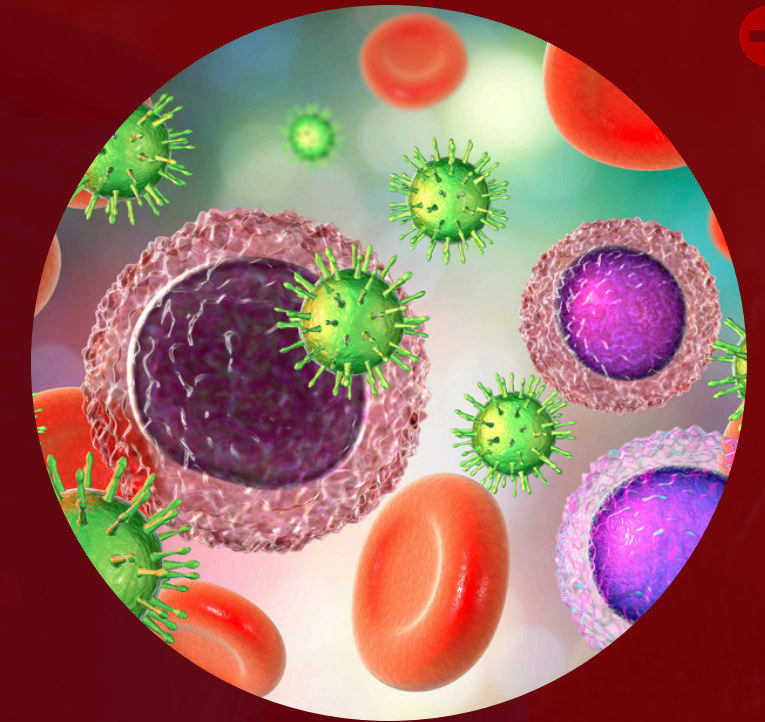

**CELLULAR REJUVINATION &
DETOXIFICATION**

**PRODUCTION OF YOUR
BODY'S OWN NATURAL
ANTIOXIDANTS**

**PREVENTING PRE-MATURE
AGING**

**REDUCING OXIDATION (FREE
RADICAL DAMAGE)**

WHAT ARE TRANSFER FACTORS?

Unlike common supplements you find in every health food stores, transfer factors aren't vitamins, minerals, herbs or phytonutrients. Instead, they are smart peptide molecules that transfer immune memory and knowledge from one entity to another and are part of a ground-breaking approach to immune system support.

IDENTIFY • REACT • RETAIN

THE CHARACTERISTICS OF TRANSFER FACTOR

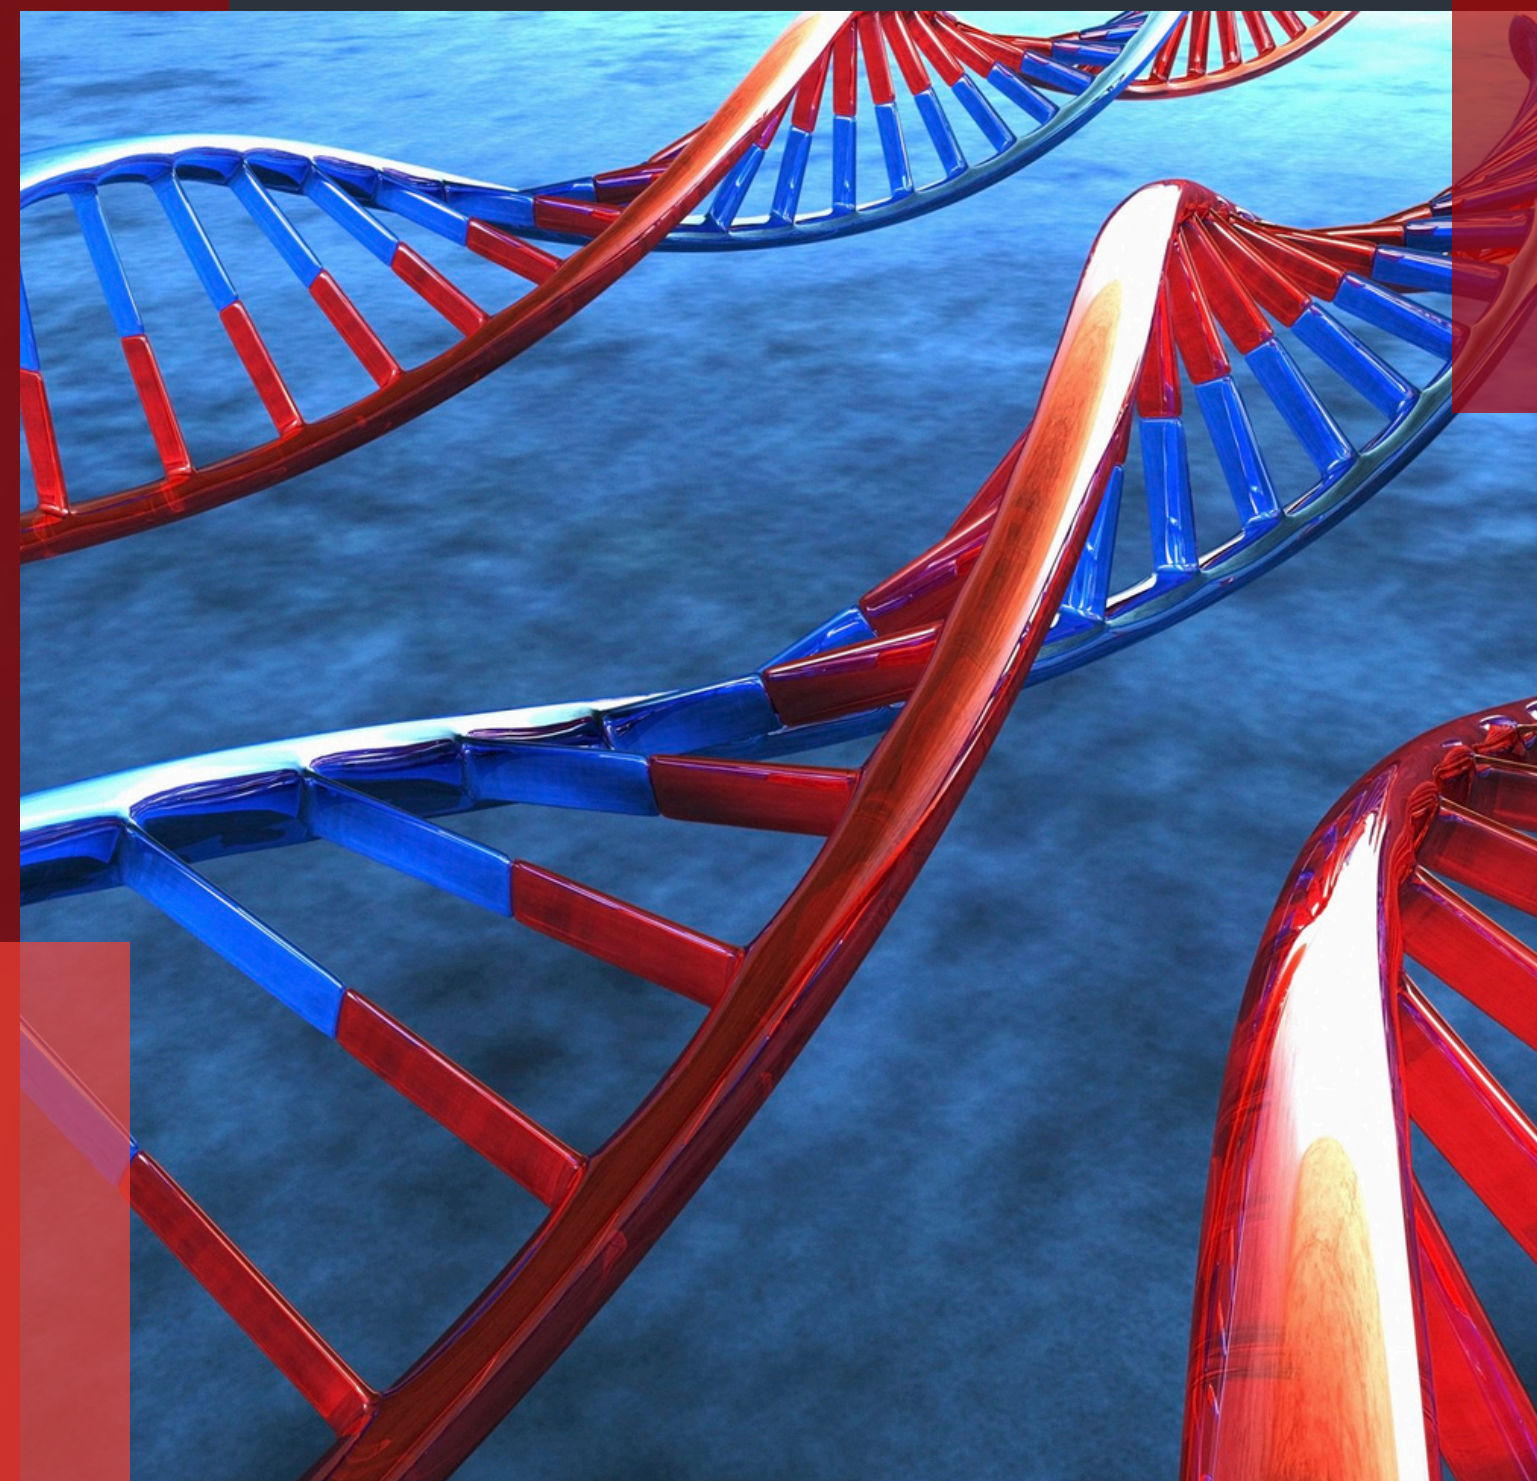

Transfer factors are extremely small smart peptide molecules, approximately 6,000-10,000 Daltons in size, made up of 44 amino acid sequences. (Really small)

In a nutshell, transfer factors are essentially the knowledge and experiences of an entity's immune system encoded on extremely small peptide molecules that can be consumed for our own immune systems to learn from. Transfer factors are structurally identical and compatible between humans and animals.

TRANSFER FACTORS ARE MASTER REGULATORS

There are hundreds of different cell types and body chemicals involved in the function of our immune system. Your immune system has smart molecules that regulate this activity. One category of these master managers/regulators is called cytokines, which have several important functions.

There is a great deal of communication taking place as your immune system coordinates activities. Cytokines communicate with other cells and molecules organizing these synergized functions. Transfer factors are in the cytokine category of master regulators/managers.

1

TRANSFER FACTORS IDENTIFY THREATS

Transfer factor is a smart molecule that coordinates and manages an education system for your natural immune system. This process starts them moment you are born.

Transfer factors store information about the activities of your immune system and characteristics of threats that your body encounters.

Each time a human (or mammal) comes in to contact with a threat and defeats it, the characteristics of that threat is encoded on a transfer factor molecule so the next time it encounters the same (or similar) threat, it will identify it quickly and coordinate the appropriate immune response to eradicate it.

WANTED

GERM

DEAD ONLY

2

TRANSFER FACTORS REACT CORRECTLY TO THREATS

Transfer factors help educate your body to react correctly to a threat. It's role is to help the body to do the right thing to help deal with the threat it is encountering in the most effeicient and effective way.

3

TRANSFER FACTORS HELP RETAIN THAT IMMUNE RESPONSE

Retain-> Transfer factors store information about the activities of your immune system and characteristics of threats that your body encounters.

Each time a human (or mammal) comes in to contact with a threat and defeats it, the characteristics of that threat is encoded on a transfer factor molecule so the next time it encounters the same (or similar) threat, it will recognize it quickly and coordinate the appropriate immune response to eradicate it.

Your immune system is constantly learning every second of every day. It is constantly working to

IDENTIFY • REACT • RETAIN

THE PURPOSE OF TRANSFER FACTOR IS TO EDUCATE & EQUIP YOUR BODY!

Transfer factor is the education system of your immune system! It teaches and instructs our bodies to:

- 🧬-**Identify** threats our body encounters
- 🧬-**React** correctly to those threats
- 🧬-**Retain** that response to that type of threat in the future

This 3 step process is what we define as immunity!

a brief history

ON TRANSFER FACTOR

In 1949, Dr. H. Sherwood Lawrence, a New York University immunologist, determined that an immune system response could be transferred from a donor to a recipient through a white blood cell extract. He concluded that these extracts contained a “factor” capable of transferring the donor’s immunity information to the recipient. Dr. Lawrence subsequently coined the term “transfer factor.”

Dr. H. Sherwood Lawrence

- **Founding editor of the Journal of Cellular Immunology.**
- **Member of the National Academy of Sciences.**
- **Graduated from New York University’s School of Medicine in 1943.**
- **Head of Infectious Diseases and Immunology at N.Y.U. in 1959.**
- **Director of N.Y.U.’s Cancer Center from 1974 to 1979.**
- **Director of N.Y.U.’s AIDS Research Center from 1989 to 1994.**

TRANSFER FACTORS- THE MIRACLE MOLECULE!

Researchers and institutions have spent an estimated \$40 million studying transfer factors and have published hundreds of scientific papers documenting the ways in which they impact the immune system.

THOROUGHLY RESEARCHED!

THERE ARE LITERALLY THOUSANDS OF SCIENTIFIC STUDIES ON TRANSFER FACTORS BY SCIENTISTS FROM ALL OVER THE WORLD! FROM 1974 TO 1999, SCIENTISTS FROM ITALY AND FRANCE USED TRANSFER FACTORS ON 1647 PATIENTS WITH NO SIDE EFFECTS. ONE-THIRD OF THESE PATIENTS WERE OBSERVED FOR 25 YEARS.

The National Institute of Health emphasizes on the benefits of Transfer Factors by publishing 12,000 scientific studies on its benefits for the immune system.

TRANSFER FACTOR ANTI-AGING STUDY

A study listed in the 2016 Physicians' Desk Reference (PDR) --Edition 70-- pg. 2212 under "**Longevity Studies**" stated that a group of 11 older men, ages 55-73, were "given 3 capsules per day of a product containing transfer factors 5 days a week for 6 weeks." **At the end of that "6 week" period, tests showed that there was a reduction of their biological age by "approximately four years".**

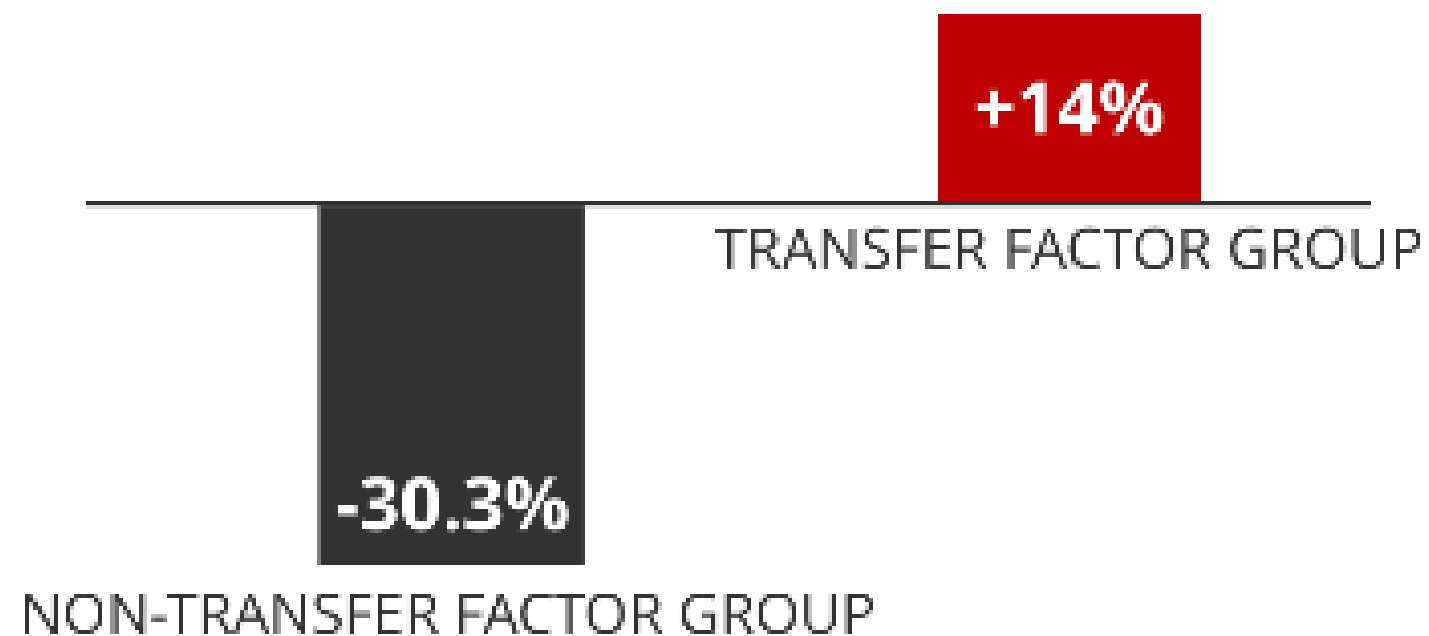

REDUCED
BIOLOGICAL
AGE BY
4 YEARS
IN ONLY
6 WEEKS!

TRANSFER FACTOR REDUCED LIPID OXIDATION BY **44.3%***

ANTIOXIDANT EFFECTS OF TRANSFER FACTOR ON LIPID INTEGRITY

44.3% IMPROVEMENT

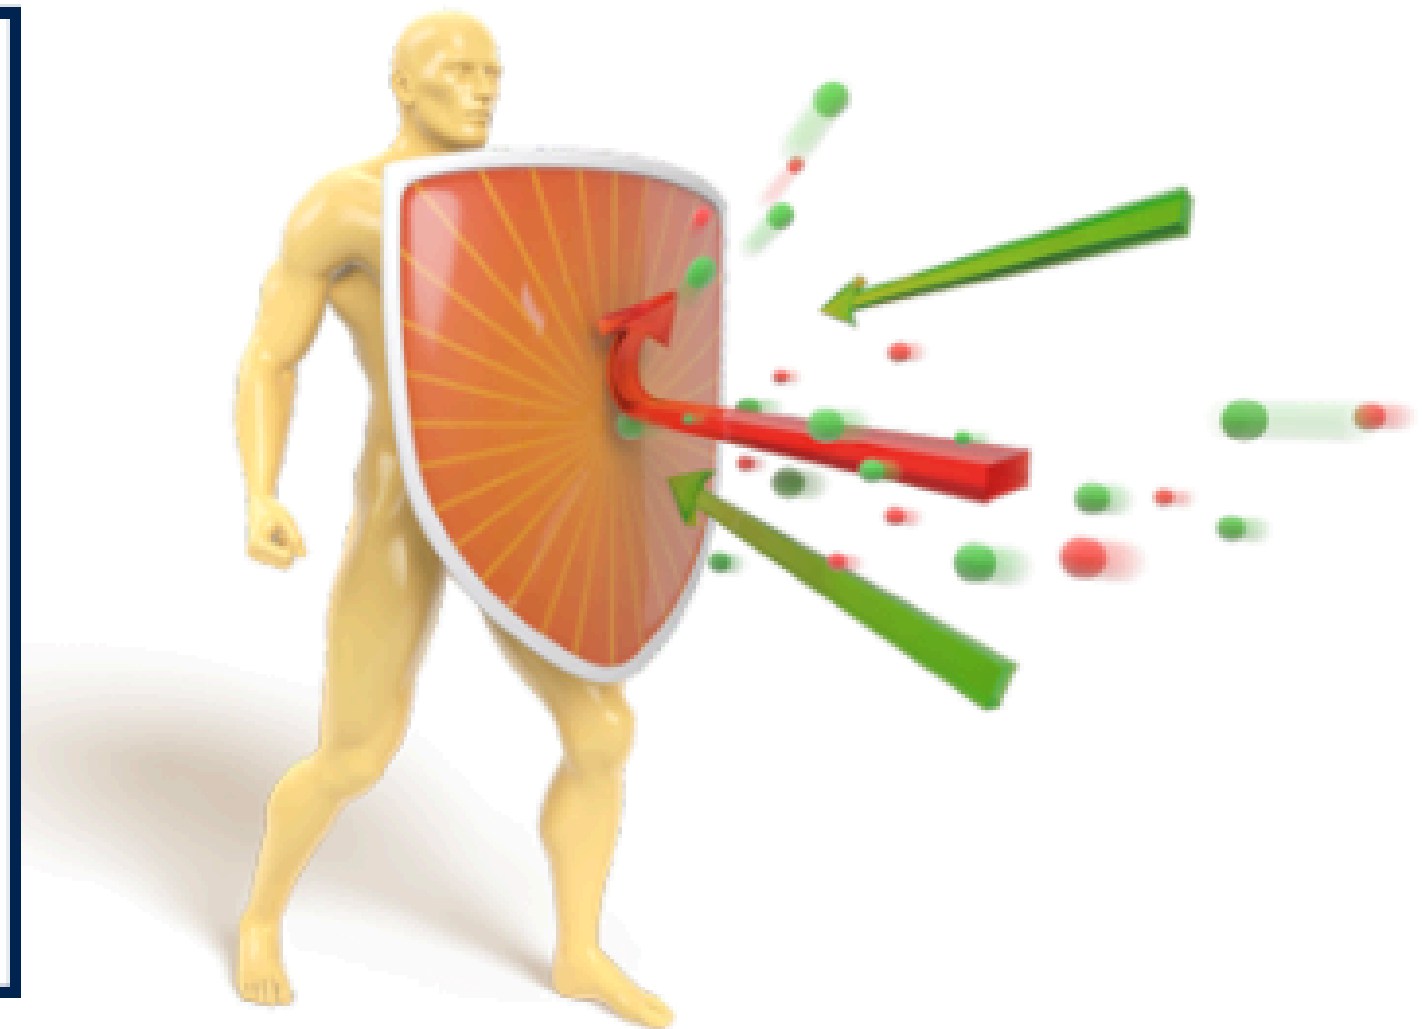

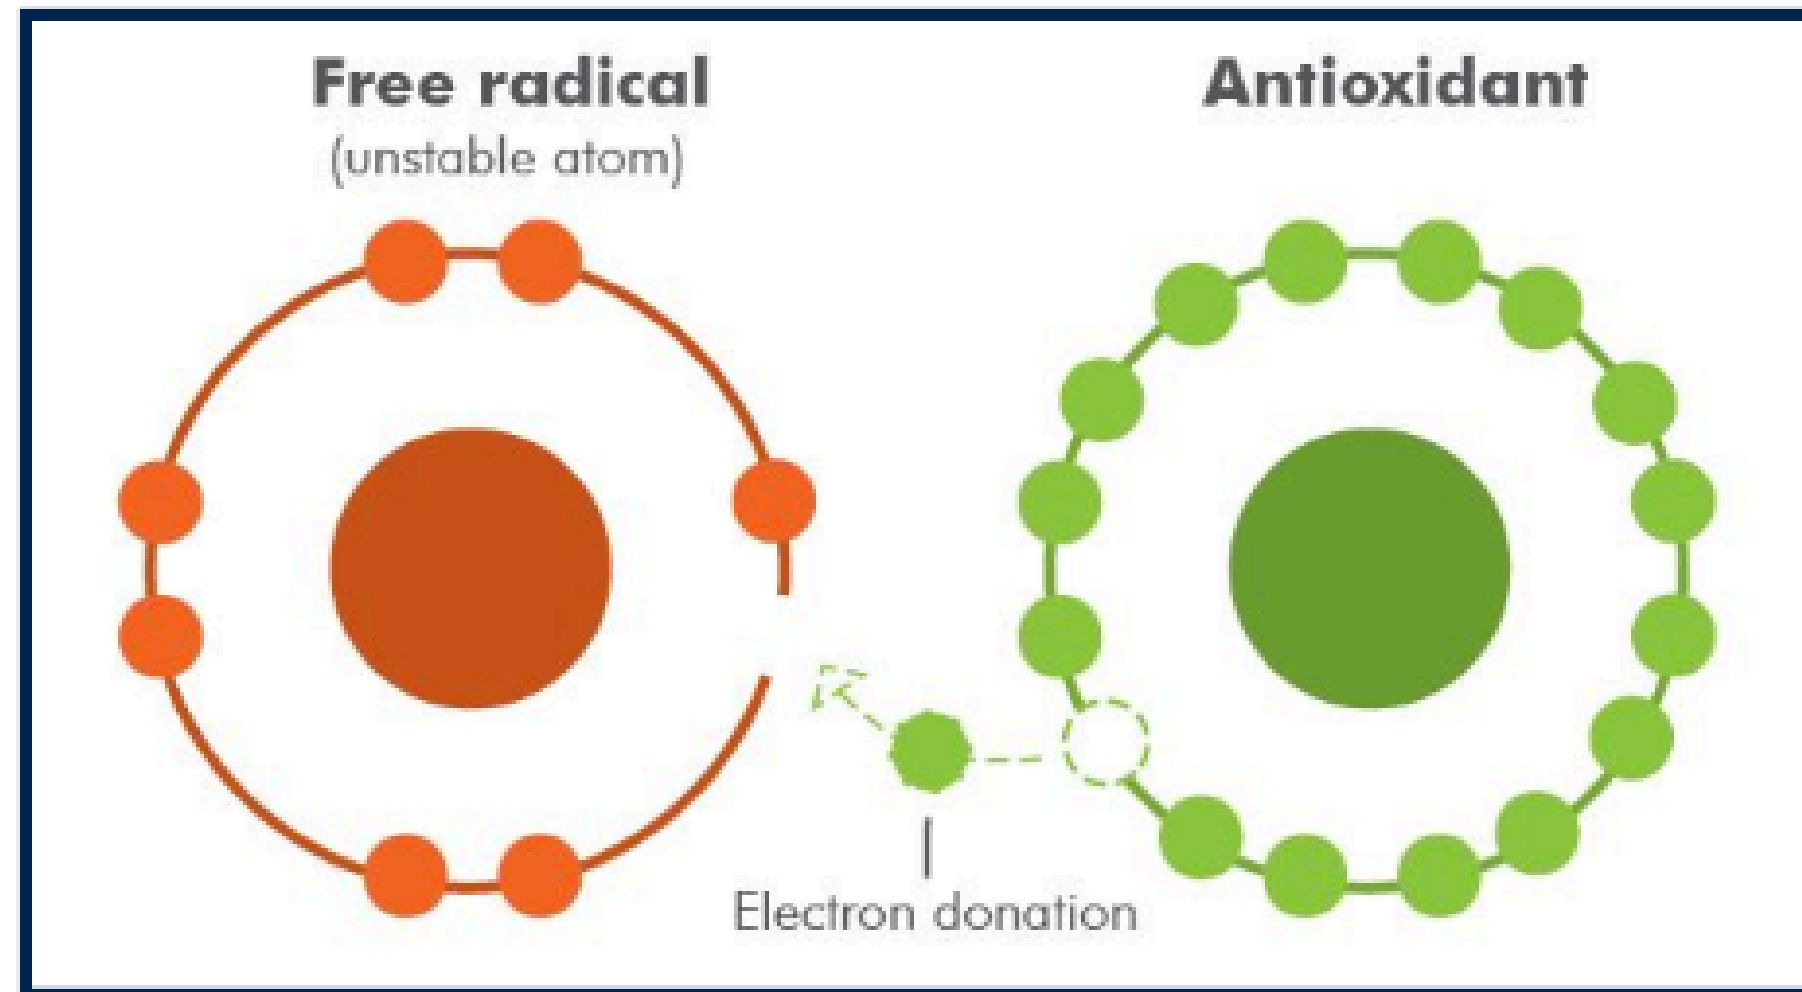

Although transfer factors are not antioxidants, transfer factors do regulate production of the body's own natural antioxidants and anti-oxidation process. In one study, transfer factors reduced lipid oxidation by 44.3%.*

Your brain, cholesterol, and every cell membrane in your body is made up of lipids. Protecting these vital organs will revolutionize your health!

TRANSFER FACTOR INCREASED THE BODY'S NATURAL PRODUCTION OF THE ANTIOXIDANT GLUTATHIONE-S-TRANSFERASE BY **150%***

Transfer factors increased the production of glutathione-S-transferase by 150%! This enzyme is responsible for detoxifying every cell in your body and especially in your liver. Three of the body's primary antioxidant enzymes, glutathione, catalase, and SOD2 were increased.

INCREASES NK CELL ACTIVITY

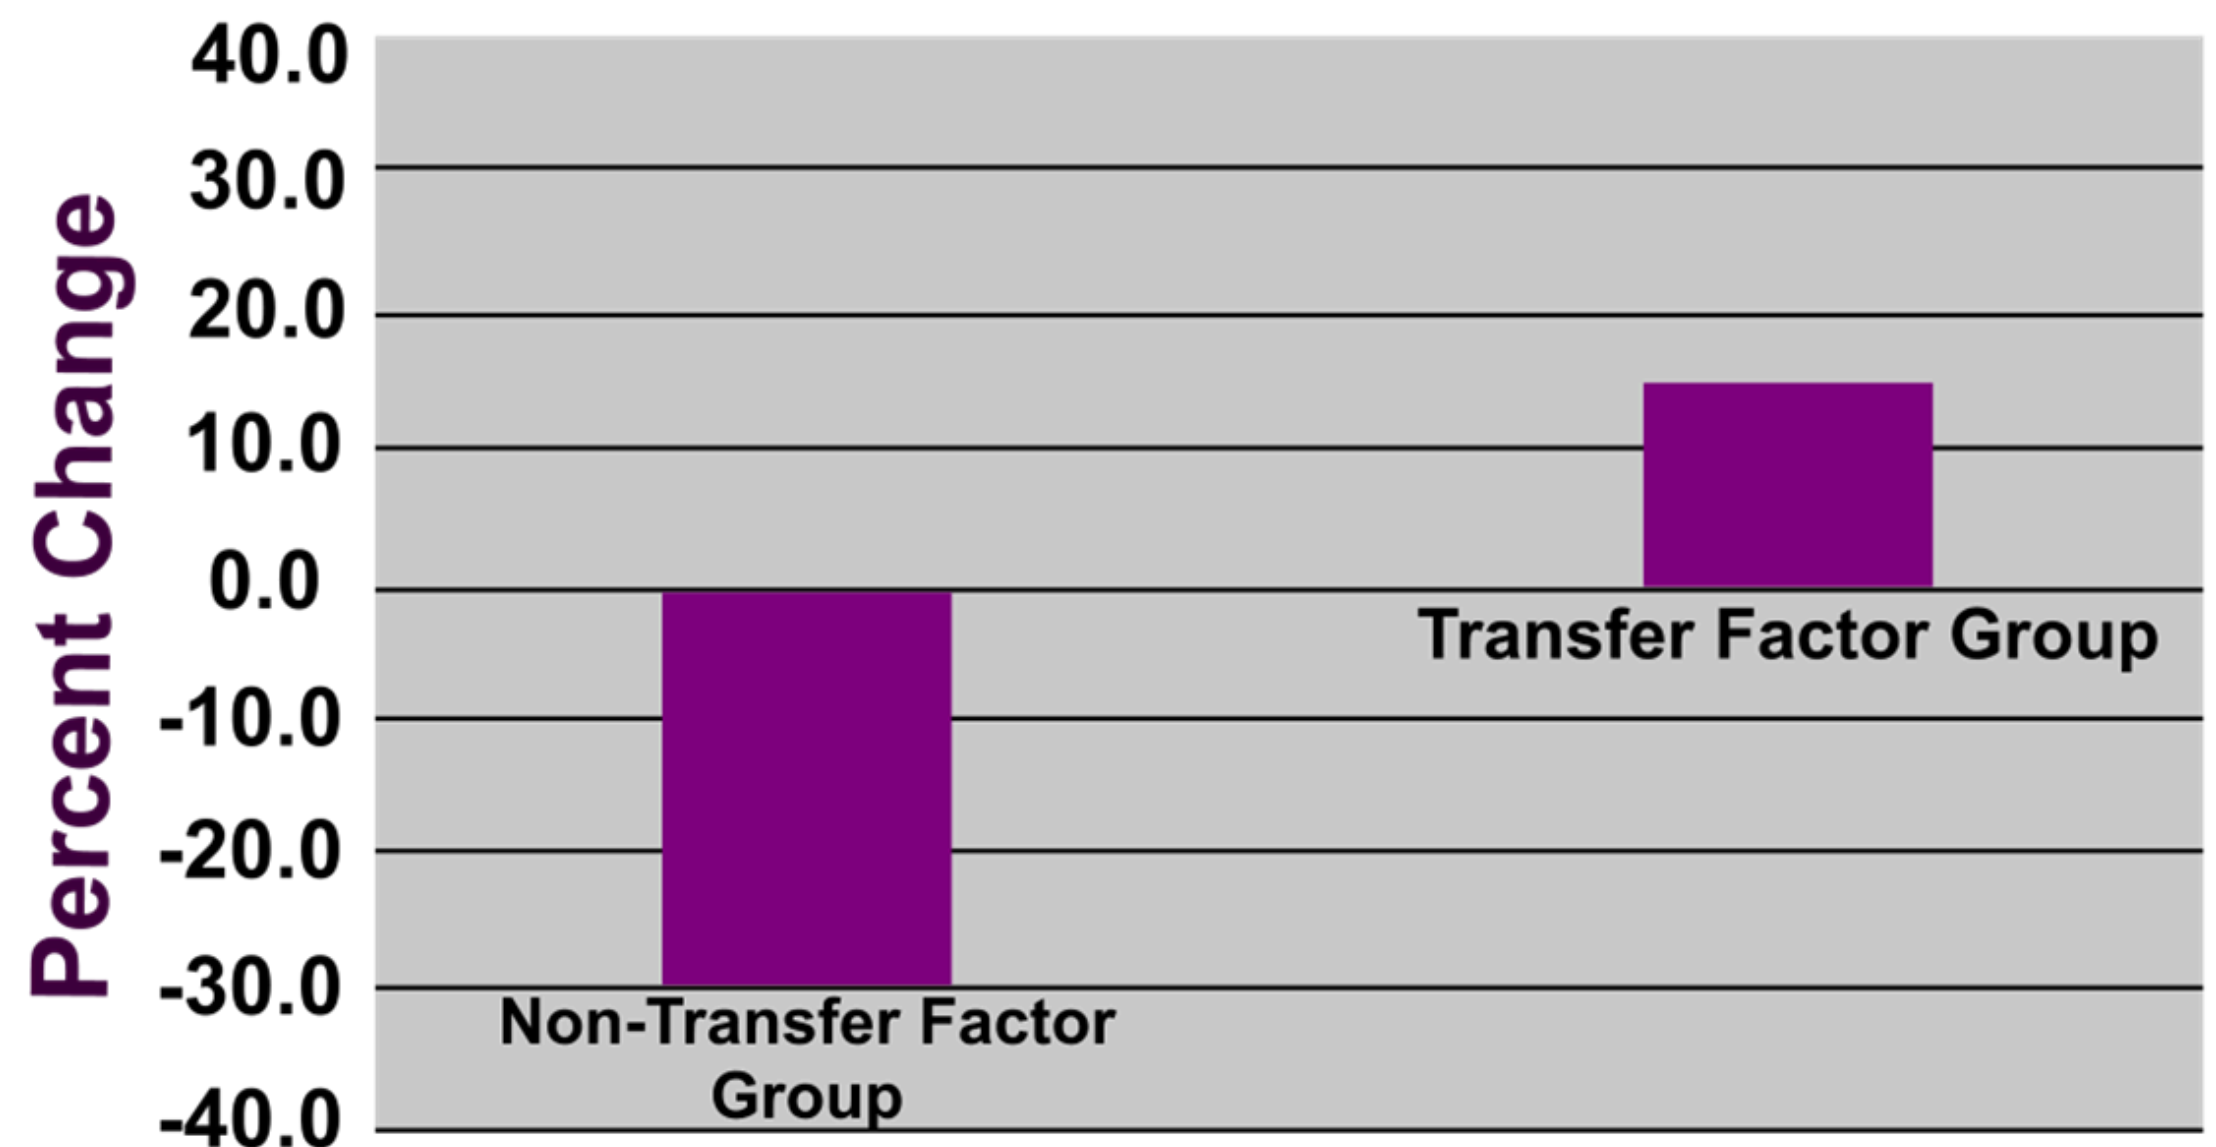

Not only do transfer factors improve the boosting effectiveness of the immune system, but **they help the immune system respond faster**, as seen in the illustration above. The faster the immune system responds, the less likely you will feel sick or experience immune system problems that could lead to long-term disorders that will show up later.

Although transfer factors are not antioxidants, transfer factors do regulate the body's own anti-oxidation process. In the illustration to the right, **transfer factors reduced lipid oxidation by 44%**. Your brain, cholesterol, and every cell membrane in your body is made up of lipids. **Protecting these vital organs will revolutionize your health!**

Antioxidant Effects of Transfer Factor on Lipid Integrity

Transfer factors increased the production of glutathione-S-transferase by 150%! This enzyme is responsible for detoxifying every cell in your body and especially in your liver. Three of the body's primary antioxidant enzymes, glutathione, catalase, and SOD2 were increased.

WHAT MAKES OUR FORMULATION ELITE?

*THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE.

WHY IS OUR PRODUCT ELITE?

01

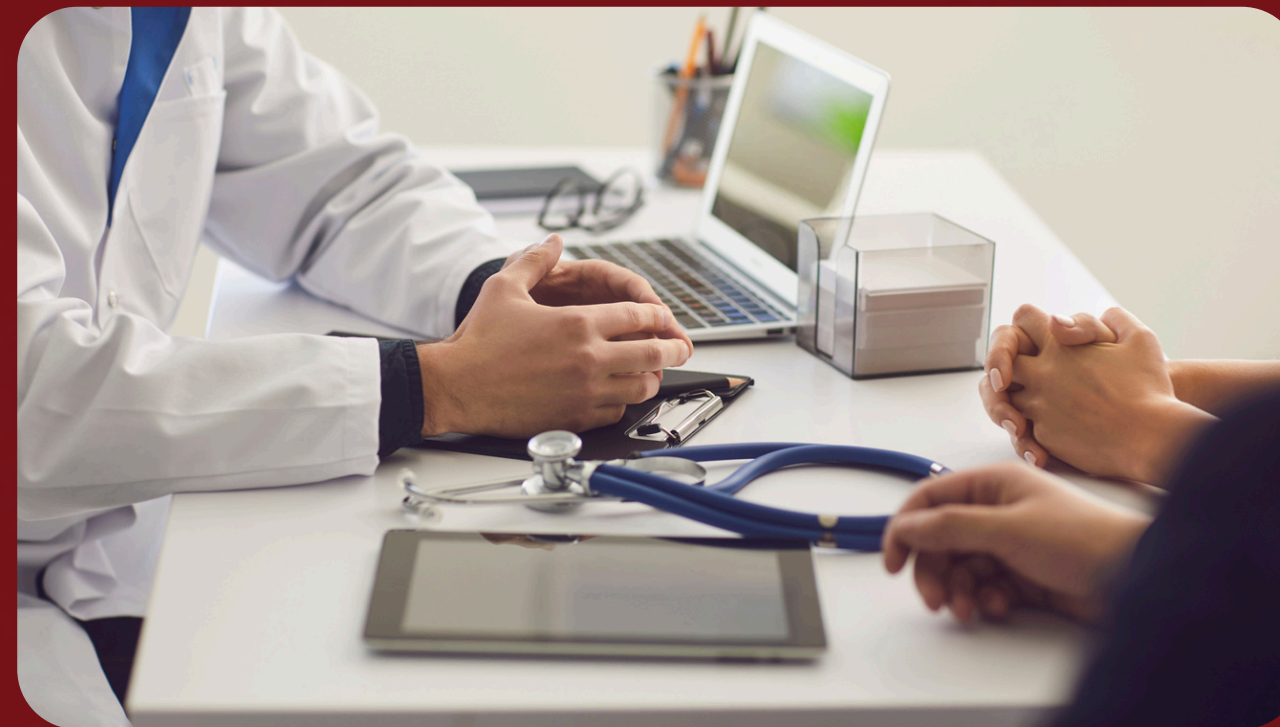

We have more than 2x's more transfer factor in our product than our closest competitor but it costs less!

02

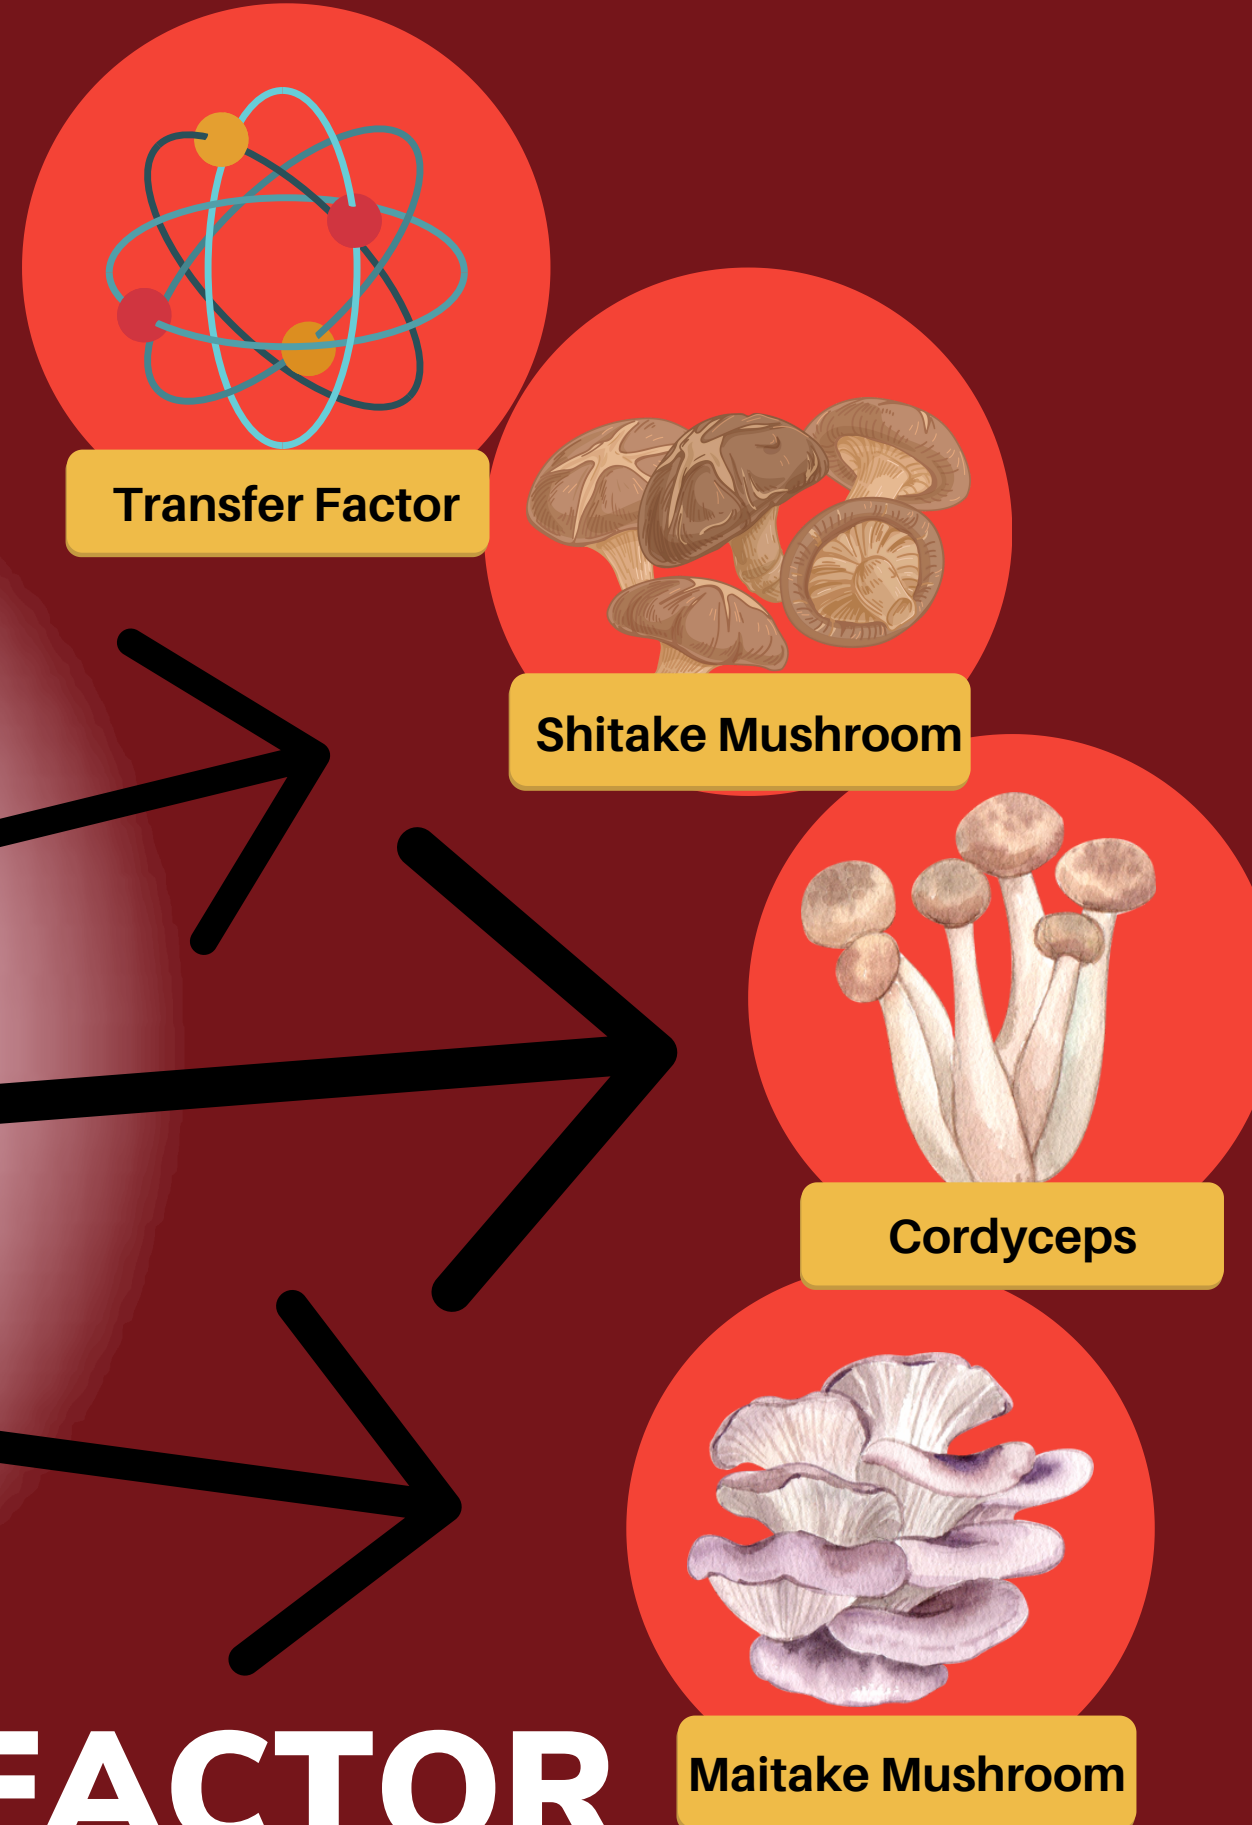

We only use highest quality of ingredients

03

Our formulation combines the power of transfer factor with the best nutrients to help enhance our immune system

TRANSFER FACTOR

TRANSFER FACTOR:

Transfer factors communicate through touching cells to help recognize whether a cell is a friend or enemy cell within our body. Because of this, the more transfer factor cells you can saturate your body with, the more effective they become.

Our formulation has more than 2 times the transfer factor than our closest competitor! To help put this in perspective, our closest competitor's science team shared they have more transfer factor molecules in 1 serving of their formula than the amount of stars the human eye can see on the darkest night! We have more than 2 times that amount in 1 serving of our formula!

COW COLOSTRUM PROTEINS & PEPTIDES

*THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE.

COW COLOSTRUM PROTEINS & PEPTIDES:

Similar to colostrum produced by humans, bovine colostrum contains special nutrients to help a newborn calf thrive:

- Antibodies
- Growth factors
- Cytokines
- Protein

- Bovine colostrum protects a newborn calf from infections as it adjusts to life outside of the mother's womb. In human uses, bovine colostrum is very good for maintaining health. It has a lot of nutritional value.
 - Proteins and peptides: The protein content in bovine colostrum is 15%, much higher than the 3% found in mature cow's milk. There are two types of protein found in bovine colostrum.
 - The first is **casein**, which makes up approximately 75% of the proteins found in dairy products. Casein contains peptides that help promote healthy digestion and plentiful pancreatic enzymes. These peptides have other beneficial properties that:
 - Help regulate your immune system
 - Have natural antibacterial properties
 - Have natural anti-inflammatory properties
 - The second type of protein is **whey**. The whey found in bovine colostrum is rich in amino acids. In addition to having antimicrobial properties, it also promotes healing.

MAITAKE + SHIITAKE MUSHROOM COMBINATION

*THESE STATEMENTS HAVE NOT BEEN EVALUATED BY THE FOOD AND DRUG ADMINISTRATION. THIS PRODUCT IS NOT INTENDED TO DIAGNOSE, TREAT, CURE, OR PREVENT ANY DISEASE.

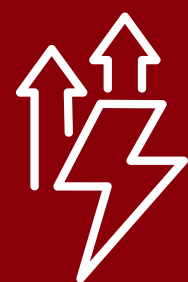

MAITAKE + SHIITAKE MUSHROOM

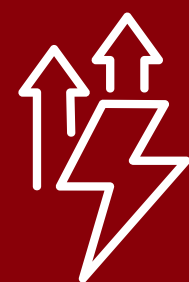

Immune-enhancing effects of Maitake (*Grifola frondosa*) and Shiitake (*Lentinula edodes*) extracts:

Oral application of natural immunomodulating glucans from Maitake and Shiitake mushrooms strongly stimulated both the cellular and humoral branch of immune reactions.

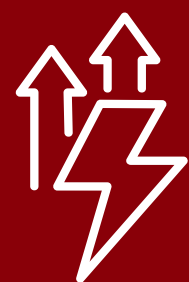

Phagocytosis, NK cell activity, and secretion of IL-6, IL-12, IFN- γ as well as C-reactive protein (CRP) after 14 days of oral application of tested glucans were measured. Studies found significant stimulation of defense reaction.
