

The Problem...

- Every 34 seconds an American dies as the result of a blocked cardiac artery.
- More than 6.8 million Americans undergo heart bypass, balloon angioplasty and other circulation related procedures each year.
- 700,000 Americans will suffer a sudden blockage of blood flow to the brain each year - that's 83 people every hour of the day.
- Year after year plaque deposits grow larger, gradually starving your heart, brain cells and every other cell in your body - setting you up for serious health problems.
- Heart disease and heart attacks are the #1 killers of women in America.
- It claims more lives than breast cancer, diabetes and accidents combined. Cardiovascular disease ranks as the number two cause of death for children under age 15.

The Solution...

Clear Heart™, an all new one-of-a-kind formulation with LArginine, EDTA, Nattokinase, Co-Enzyme Q-10 plus many other proven ingredients designed to help clear and remove 10, 20, 30 even 40 years or more of plaque and calcium deposits from the heart and arteries.

This truly amazing formulation is an exclusive product created by an internationally renowned pioneer and leader in the field of both I.V. and oral chelation therapy.

In medical studies, EDTA has been shown to be safe for humans and has been proven effective in helping to remove plaque from the arteries over many years of intense studies.

In fact, EDTA is so safe for humans, the American Heart Association recommends massive direct intravenous injections as treatment for people who have been exposed to toxic lead, mercury, aluminum, and cadmium.

Scientific studies have proven that EDTA is up to 82% effective at eliminating rogue calcium from plaque, causing clogs to soften, let go and be flushed away! Simply put, this therapy is widely known to be a powerful remedy for - and protection against - heart, joint, kidney and even hearing problems!

The U.S. Medical Association - including the American College for Advancement in Medicine (ACAM) - are dedicated to training doctors in the use of chelation therapy to improve hardening of the arteries and other chronic degenerative issues. As a result, U.S. doctors enthusiastically recommend EDTA chelation therapy to their patients.

Chelation therapy is given to more than 1 million Americans and 3 million patients in Canada, Europe, Australia, and South America every year.
